

HDFI • 2021 ANNUAL CONFERENCE

15^o Years Anniversary

New solutions for successful transitions to IP

Emily Dubs
Head of Technology, DVB
Rome, 4 November 2021

Agenda

In Europe, different migration paths to IP coexist across markets

DVB-I Service Discovery, a harmonized and network-agnostic service layer

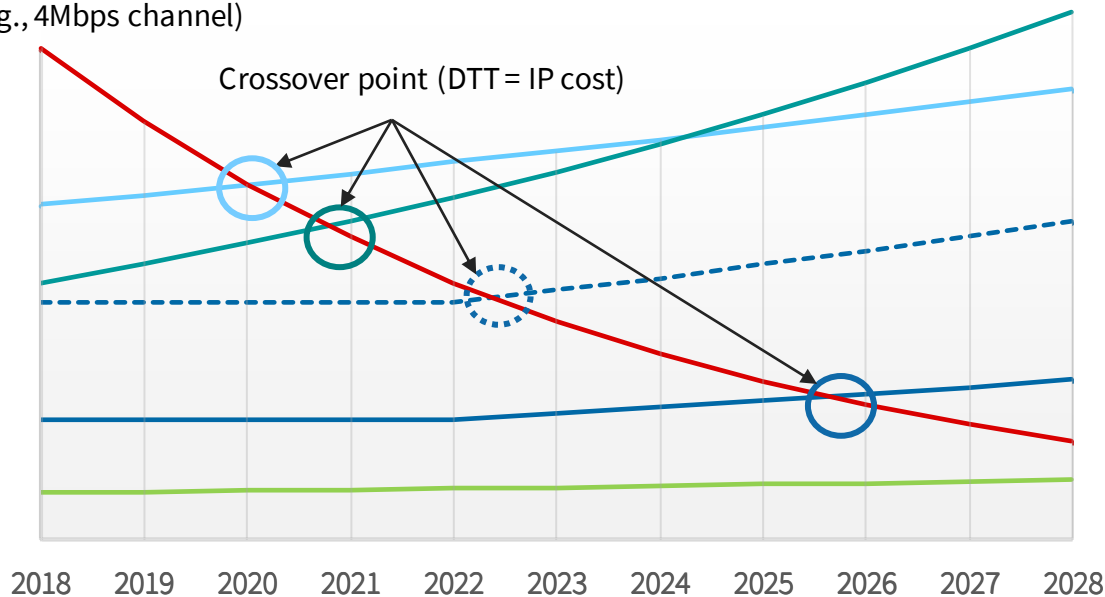

The wider ecosystem: DVB's IP-centric solutions for smooth migration strategies

DVB-NIP (Native IP), media streaming over broadcast

Useful links, webinars & demos

A phased migration to IP is expected across Europe

Cost per Viewer Hour
(e.g., 4Mbps channel)

Source: Ofcom research

—○— IP - All countries

DTT in Country A

Small nation with low population density, well-developed fibre broadband, and DTT/cable/sat equal shares.

—○—

DTT in Country B

Large nation with mainly urban population and rural, lightly inhabited areas, and DTT is the main TV network.

---○--- Niche channel

—○— Popular channel

Country C

Large nation with mainly urban population and rural, lightly inhabited areas. DTT serves a single digit % share.

—○— DTT

—○— VSAT

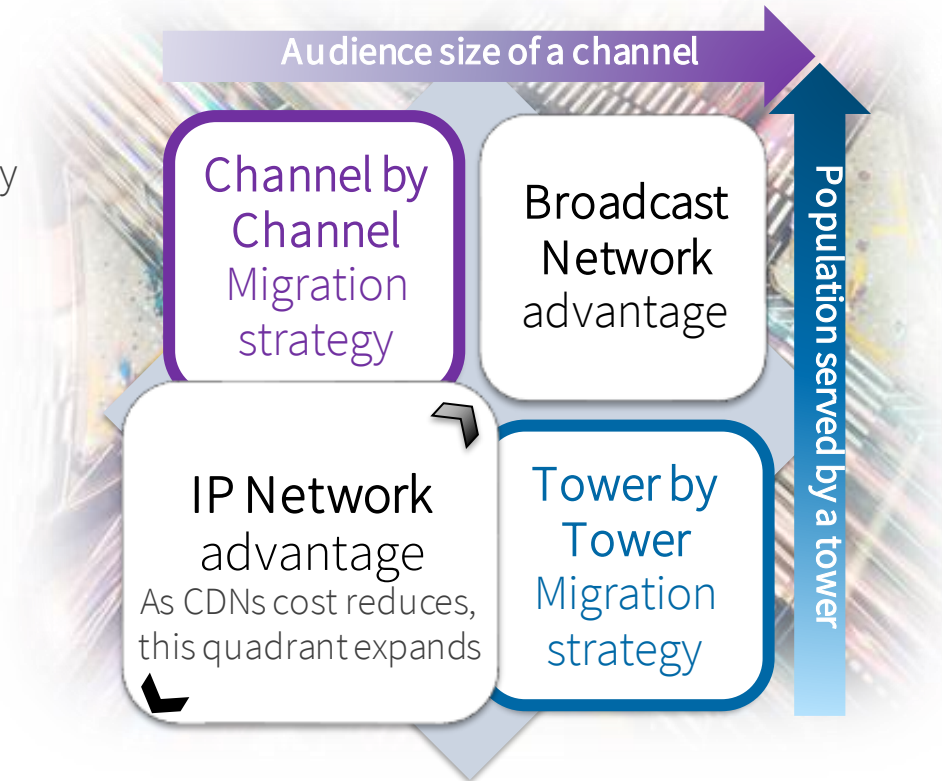

«Per channel» and «per tower» migration paths will coexist

Different forms of DTT migrations paths:

- **Towerbytower** migration strategy
- **Channelperchannel** migration strategy

➔ Different forms hybrid networks usage will remain for long

The right tools are needed for successful migration journeys

All roads lead to DVB-I

DVB is creating the much-needed transition model

Agenda

In Europe, different migration paths to IP coexist across markets

DVB-I Service Discovery, a harmonized and network-agnostic service layer

The wider ecosystem: DVB's IP-centric solutions for smooth migration strategies

DVB-NIP (Native IP), media streaming over broadcast

Useful links, webinars & demos

DVB-I defines services discovery over the internet

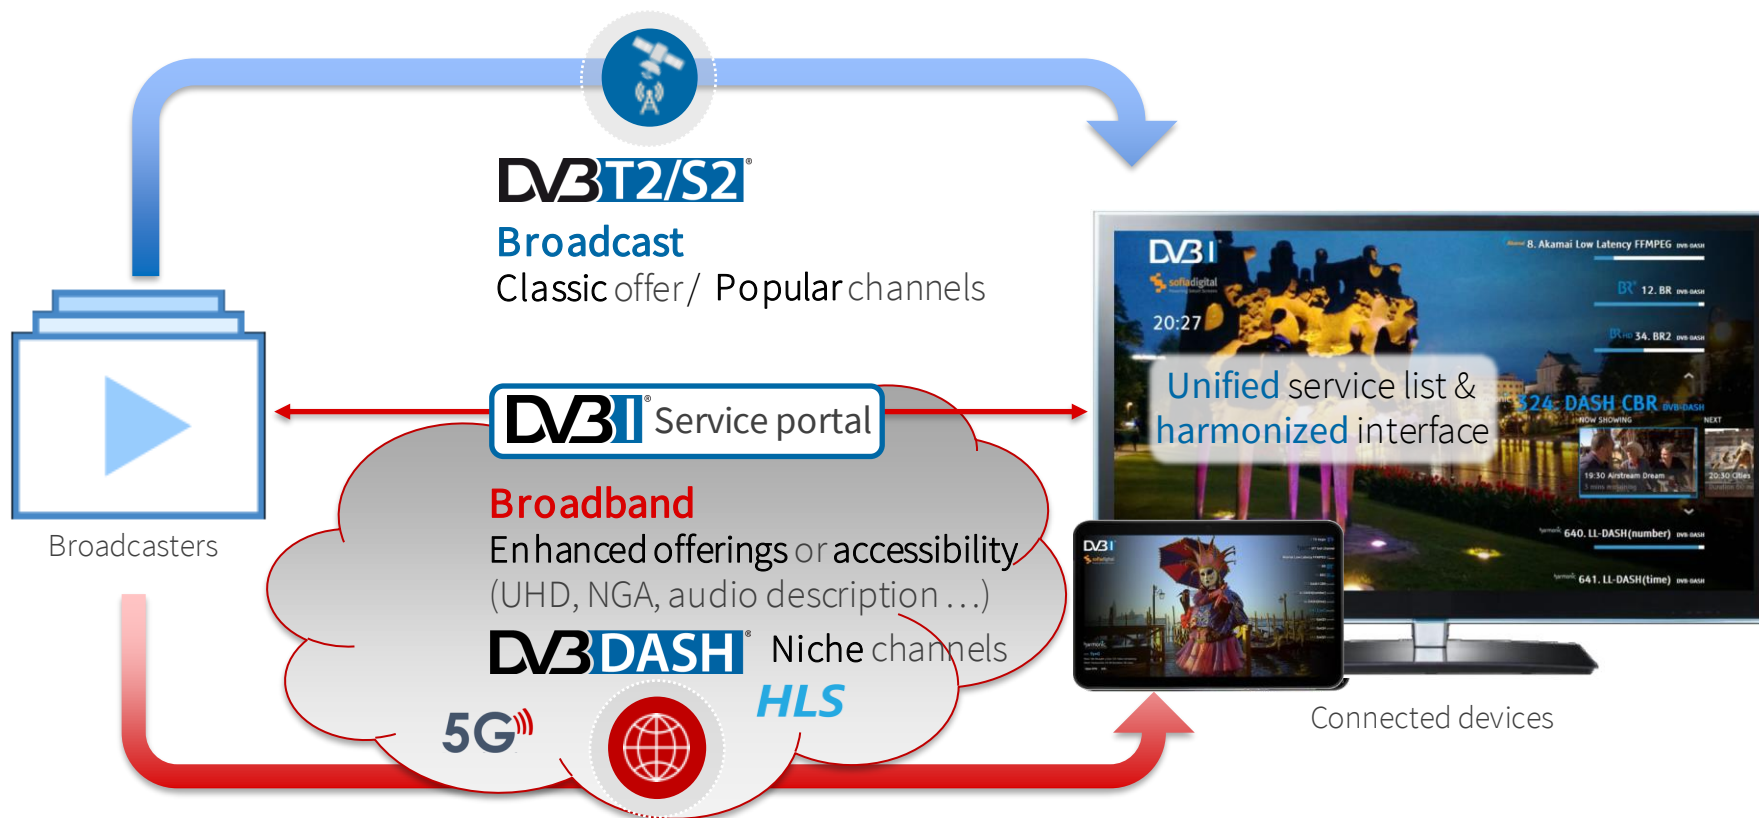

DVB-I (TS 103 770) defines the mechanisms for the **discovery of service lists** and to retrieve EPG over the internet

DVB-DASH (TS 103 285) is the optimized streaming format defined for the **delivery of DVB-I services** over the internet

DVB-I offers a common service layer across networks

DVB-I allows enhanced offerings / smooth IP migrations

DVB-I for 5G (or for **any** future distribution standard)

[News](#)

- ❑ In July, Commercial Requirements (CRs) for the use of **DVB-I as the service layer on top of 5G** were published ([DVB BlueBook C100](#))
 - Support Rel-16-based 5G operation modes (5G Broadcast, 5GMS)
 - Collaboration with 3GPP to monitor the work beyond Rel-16
- ❑ DVB-I services over 5G will support integrated DVB-I hybrid services, whose basic broadcast distribution is augmented with unicast for:
 - extended service coverage,
 - lower distribution costs,
 - improved quality and additional user experiences.

DVB-I can serve as the “service aspect” of any IP centric distribution platform, creating interfaces and APIs to distribute services over any IP network.

DVB-I Central Service List Registry (CSR) - PoC

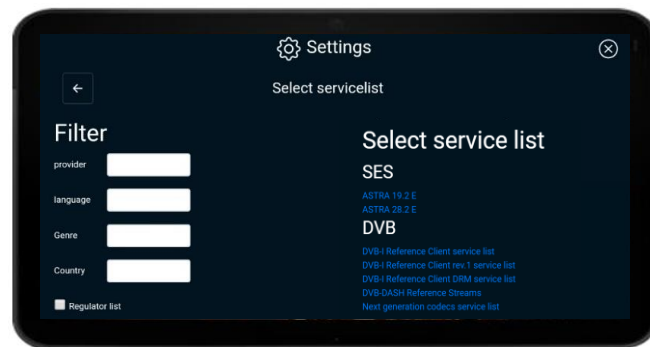

[News](#)

“Relevant services can be found among thousands”

“A CSR opens the door for existing closed platforms to a huge new variety of alternative content.”

- ❑ A DVB-I CSR will enable **fast and efficient access to the Service Lists**, which may be created by content providers, service operators, national regulators, ...
- ❑ In August, Sofia Digital has been selected to build a skeleton DVB-I CSR
 - The 1st phase is a PoC to validate the technical approach taken in the DVB-I standard
 - Under the 2nd phase, the implementation will be made freely available for others to test their own DVB-I services and clients.

[DVB-I Reference application](#)

DVB-I, a game changer for broadcasters

Wider **audience** and **devices** reach,
better service prominence (not relying on apps visibility)

Common services deployed across devices, without custom integrations or agreements with manufacturers

Lower distribution costs thanks to an optimised (broadcast / broadband) network usage

Higher **interoperability** and **quality**

New opportunities thanks to

Personalized content
Targeted Advertising
Role to play in the 5G ecosystem

Agenda

In Europe, different migration paths to IP coexist across markets

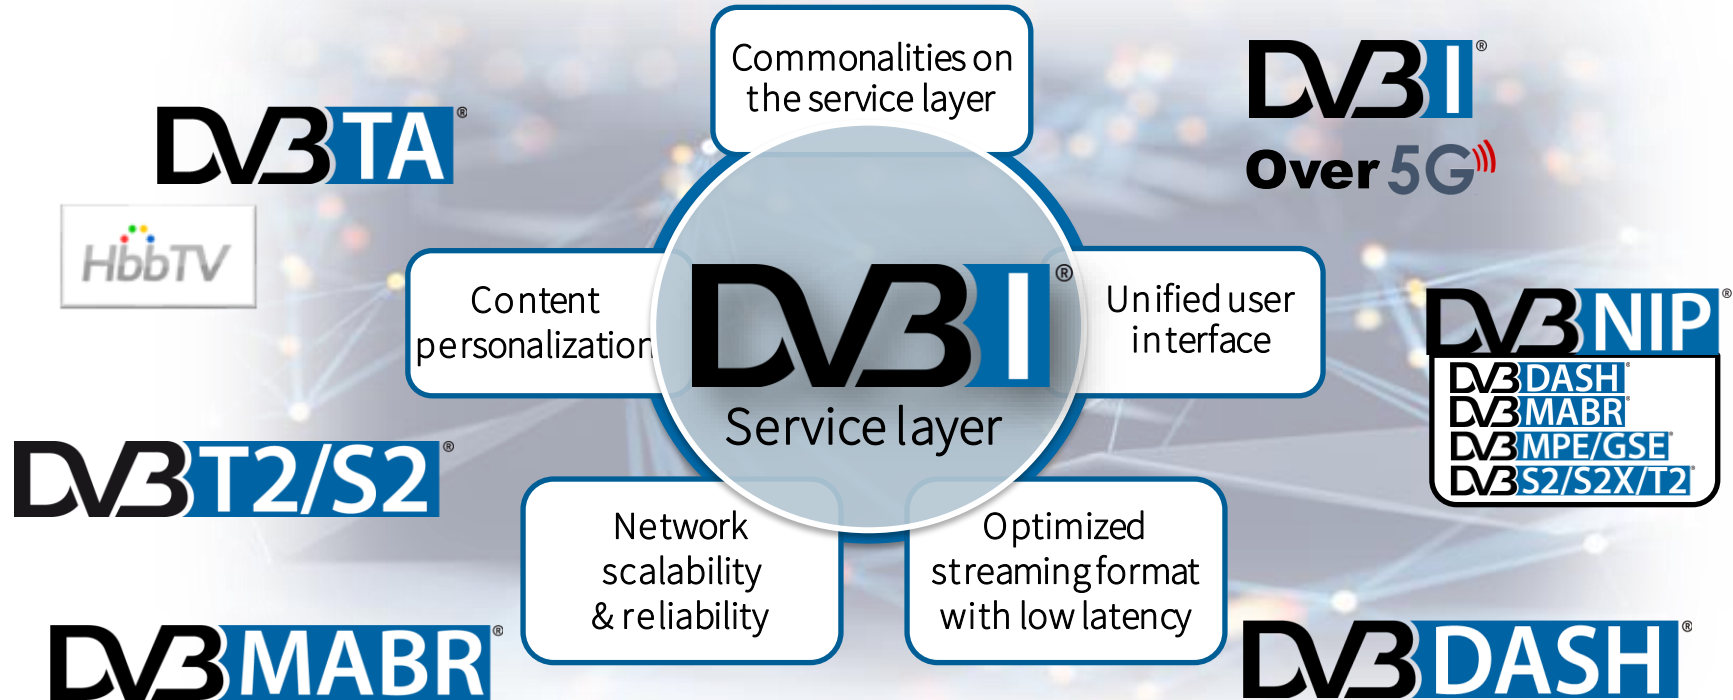

DVB-I Service Discovery, a harmonized and network-agnostic service layer

The wider ecosystem: DVB's IP-centric solutions for smooth migration strategies

DVB-NIP (Native IP), media streaming over broadcast

Useful links, webinars & demos

DVB-I wider ecosystem offers a complete transition toolset

Agenda

In Europe, different migration paths to IP coexist across markets

DVB-I Service Discovery, a harmonized and network-agnostic service layer

The wider ecosystem: DVB's IP-centric solutions for smooth migration strategies

DVB-NIP (Native IP), media streaming over broadcast

Useful links, webinars & demos

DVB's Native IP solution: Media streaming over broadcast

...A vision for the future

1990s-20xx

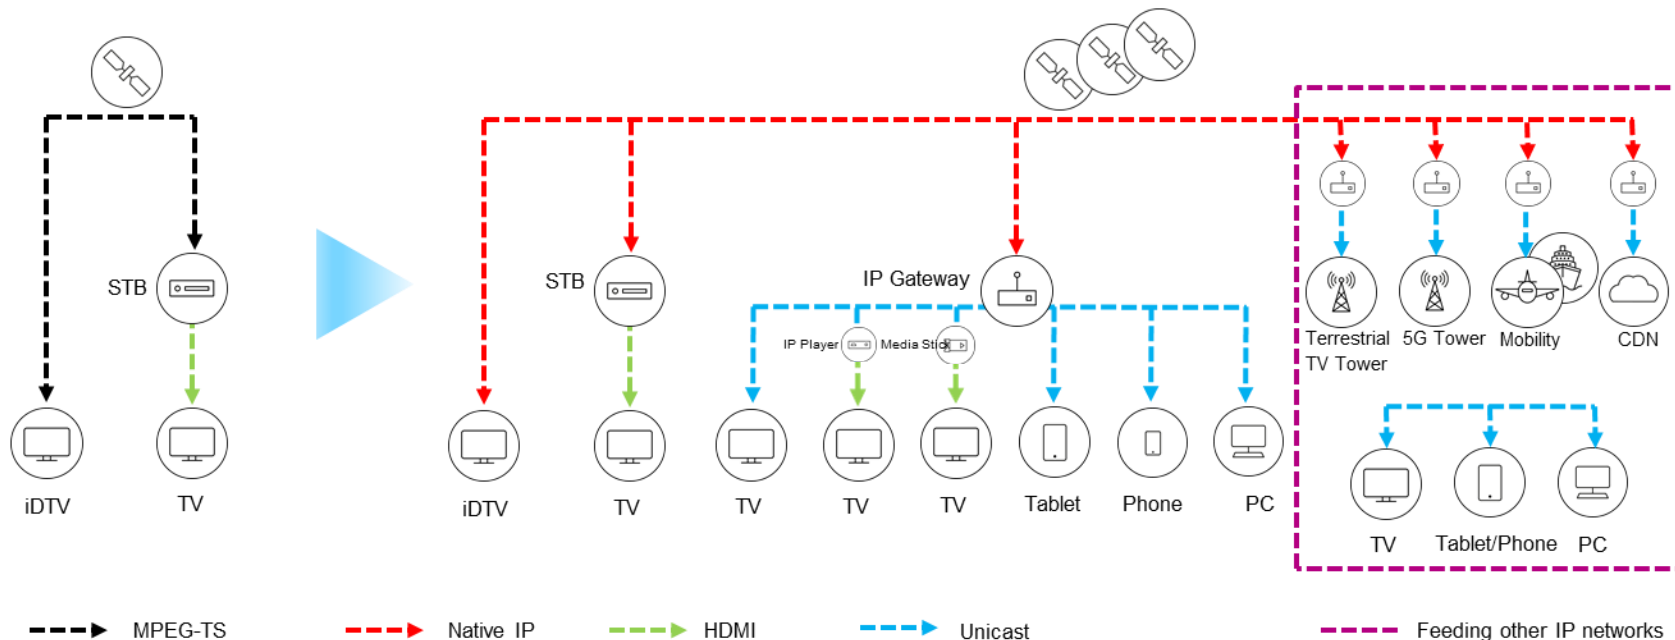

> 20xx

DVB NIP

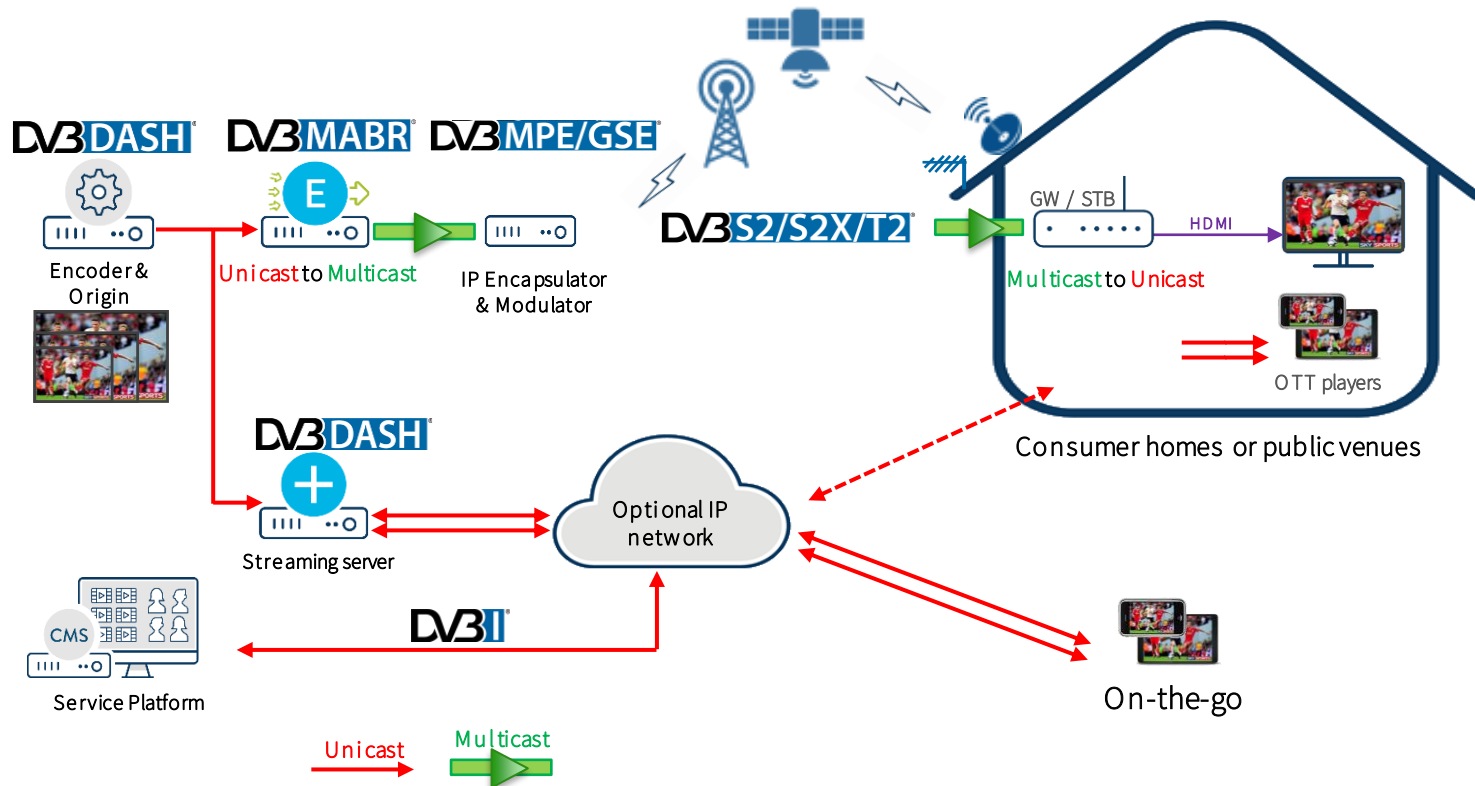

Release: Q1 2022

(Linear MPEG-TS video)

File-based IP-delivered video

Native IP leverages existing DVB solutions

Agenda

In Europe, different migration paths to IP coexist across markets

DVB-I Service Discovery, a harmonized and network-agnostic service layer

The wider ecosystem: DVB's IP-centric solutions for smooth migration strategies

DVB-NIP (Native IP), media streaming over broadcast
